June 14, 2016

To Whom It May Concern:

Acumen Security verified that the following software faithfully embeds a FIPS 140-2 validated cryptographic module,

- Cisco WebEx Meetings Server v 2.7.

During the course of the review, Acumen Security confirmed that the following FIPS 140-2 cryptographic modules are incorporated into the product,

- Cisco FIPS Object Module (Version 6.0), certificate #2505,
- RSA BSAFE® Crypto-J JSAFE and JCE Software Module (version 6.1), certificate #2058.

Acumen Security confirmed that the following features leverage the embedded modules to provide cryptographic services, including, symmetric encryption, hashing, key derivation, key exchange, and asymmetric encryption:

- Cisco FIPS Object Module (Version 6.0):
    - SSH,
    - TLS (SIP),
    - sRTP.
- RSA BSAFE® Crypto-J JSAFE and JCE Software Module (version 6.1):
    - Encrypted Password Storage.

Additionally, Acumen Security confirmed that the above referenced cryptographic module is initialized in a manner consistent with the instructions provided in the non-proprietary Security Policy.

Details of the verification may be obtained from Cisco Systems, Inc. at the request of interested parties. This letter represents the independent opinions of Acumen Security and does not imply endorsement of the product by the CMVP or any other parties.

Sincerely,

Ashit Vora
Laboratory Director
