The release notes contain information about the new features introduced in the Cisco NCS 4000 Series. For detailed information regarding features, capabilities, hardware, and software introduced with this release, see the guides listed in the *Additional References* section.

Revision History

Date	Notes
September 2019	This is the first release of this publication.

Software and Hardware Requirements

Before you begin to install the software, you must check whether your system meets the minimum software and hardware requirements.

- Hardware— Intel Core i5, i7, or faster processor. A minimum of 4 GB RAM, 100 GB hard disk with 250 MB of available hard drive space.
- One of these operating System:
 - Windows 7, Windows Server 2008, or later.
 - Apple Mac OS X
 - UNIX workstation with Solaris Version 9 or 10 on an UltraSPARC-III or faster processor, with a minimum of 1 GB RAM and a minimum of 250 MB of available hard drive space.

- Ubuntu 12.10
- Java Runtime Environment—Java Runtime Environment Version 1.8.
- Browser:
 - Internet Explorer
 - Mozilla
 - Safari
 - Google Chrome

New Features for Release 6.5.26

Note Before you dive into this release's features, we invite you to content.cisco.com to experience the features of the [Cisco Content Hub](#). Here, you can, among other things:

- Create customized books to house information that's relevant only to you.
- Collaborate on notes and share articles by experts.
- Benefit from context-based recommendations.
- Use faceted search to close in on relevant content.

This section highlights new NCS 4000 features for Release 6.5.26:

Software

The following software features have been introduced in Release 6.5.26:

Inter-rack RP pairing

In a multi chassis (MC) system, there is a possibility that the rack which houses the active RP and standby RP may go down. This results in the reboot of all the line card chassis, thus impacting traffic of the MC system. Inter-rack (or cross-rack) pairing allows pairing route processors (RP) between racks to provide high availability (HA) against rack failures. The RP of one rack is paired with an RP in the next rack. In case of failure of the rack which houses the active RP, the standby RP which is in another rack takes over.

For more information on the above software features, see the *Configuration Guide for Cisco NCS 4000 Series*.

External Caveats

External Bugs in Release 6.5.26

The following list contains known issues for Release 6.5.26:

Caveat ID Number	Description
CSCvk09773	Loss of Frequency Sync Data got stuck on 10GE controller after router reload
CSCvn68432	FIA PON on fia restart event due to random WB update
CSCvo96645	After ISSU UPG to 6.5.25, otn_framer_digi400g process crashed
CSCvp15301	MC OTN : MC device in CWW state intermittently due to NETCONF RPC
CSCvp45779	NCS4K: L2 Bundle sub interface RX stats not working
CSCvp60917	Ping and data path not working on TE tunnels post DB backup/restore.
CSCvp93466	NCS4K: SU from 6.5.25 to 6.5.26, cm process crashed & FPD devices on calvados aren't displayed
CSCvq25914	NCS4K: 6.5.25: packets didn't exit the LC11 switch to RP0 via port 24 but vice versa is ok
CSCvq82968	HS Ports link enhancement
CSCvr37483	SVS.576: After Active & Standby RP removal, two VSO6 tunnels taking ~20 min to restore

Cisco Bug Search Tool

Use the Bug Search Tool (BST) to view the list of outstanding and resolved bugs in a release.

BST, the online successor to Bug Toolkit, is designed to improve the effectiveness in network risk management and device troubleshooting. The tool allows partners and customers to search for software bugs based on product, release, and keyword, and aggregates key data such as bug details, product, and version. The tool has provision to filter bugs based on credentials to provide external and internal bug views for the search input.

Search Bugs in BST

Procedure

-
- Step 1** Go to <https://tools.cisco.com/bugsearch/>. You will be prompted to log into Cisco.com. After successful login, the Bug Toolkit page open.
- Step 2** Enter the bug ID in the Search For: field. To search for release bugs, enter the following parameters in the page:
- Search For — Enter NCS4k in the text box.
 - Releases — Enter the release number.
 - Show Bugs — Select Affecting or Fixed in these Releases
- Step 3** Press Enter.
- By default, the search results include bugs with all severity levels and statuses, and bugs that were modified during the life cycle of the bug. After you perform a search, you can filter your search results to meet your search requirements.
 - An initial set of 25 search results is shown in the bottom pane. Drag the scroll bar to display the next set of 25 results. Pagination of search results is not supported.
