[Introduction](#)

Ce document décrit comment configurer le pare-feu Cisco Secure PIX Firewall dans un VPN IPSec site à site avec des adresses réseau privées qui se chevauchent derrière des passerelles VPN. La fonction NAT (Network Address Translation) améliorée introduite dans PIX 6.2 est utilisée dans cet exemple pour traduire les réseaux qui se chevauchent de chaque côté du tunnel VPN IPSec en espaces d'adresses qui ne se chevauchent pas.

[Conditions préalables](#)

[Conditions requises](#)

Aucune spécification déterminée n'est requise pour ce document.

[Components Used](#)

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Cisco Secure PIX Firewall 506 avec version logicielle 6.3(3)

- Concentrateur VPN 3030 avec version logicielle 4.1(5)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Pour plus d'informations sur les conventions des documents, référez-vous aux [Conventions utilisées pour les conseils techniques de Cisco](#).

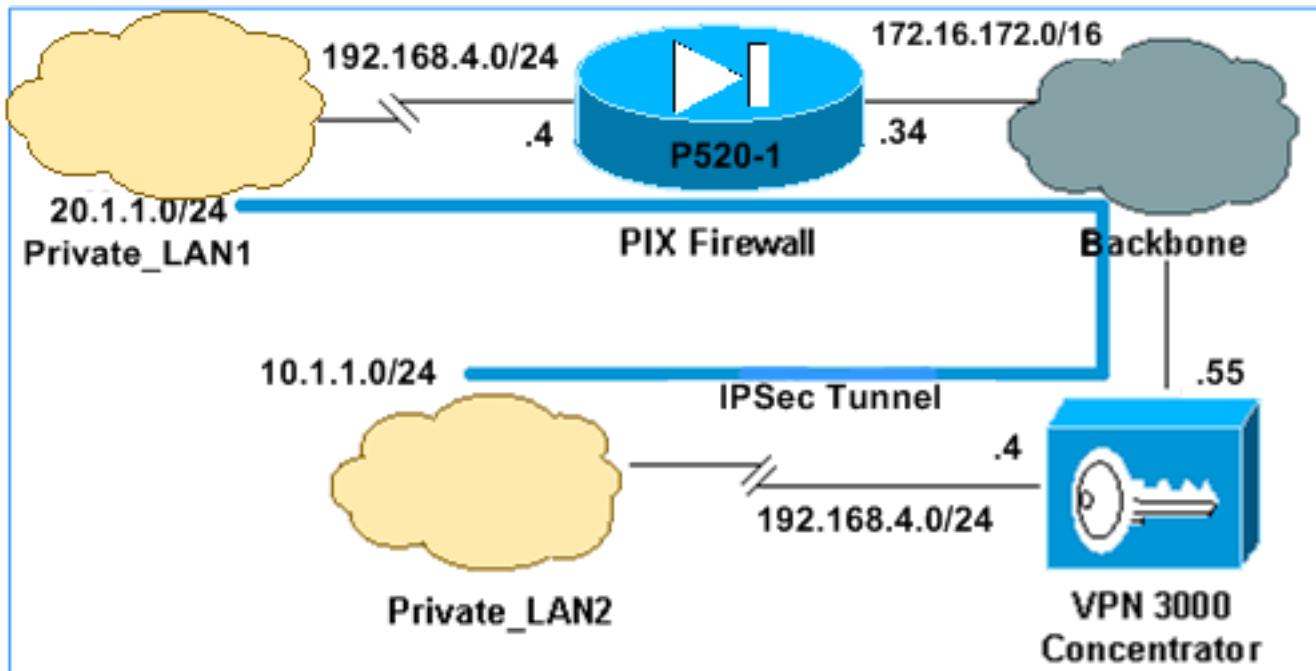

Configuration

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

Remarque : Pour en savoir plus sur les commandes utilisées dans le présent document, utilisez [l'outil de recherche de commandes](#) (clients [inscrits](#) seulement).

Diagramme du réseau

Ce document utilise la configuration réseau indiquée dans le diagramme suivant.

Private_LAN1 et Private_LAN2 ont tous deux un sous-réseau IP de 192.168.4.0/24. Cela simule l'espace d'adressage qui se chevauche derrière chaque côté du tunnel IPSec. Le concentrateur VPN 3000 est utilisé ici comme exemple d'un concentrateur qui n'a pas la fonctionnalité NAT sur le trafic VPN.

Dans cet exemple, le PIX effectue une traduction bidirectionnelle afin que les deux réseaux locaux privés puissent communiquer via le tunnel IPSec. La traduction signifie que Private_LAN1 « voit » Private_LAN2 comme 10.1.1.0/24 via le tunnel IPSec, et Private_LAN2 « voit » Private_LAN1 comme 20.1.1.0/24 via le tunnel IPSec.

Configuration du tunnel LAN à LAN du concentrateur VPN 3000

Pour l'adresse de destination 20.1.1.0 /24 (Private_LAN1), vous devez disposer d'une route statique sur le VPN 3000. Pour ce faire, sélectionnez Configuration > System > IP Routing > Static Routes et choisissez Add. Une fois les champs remplis, cliquez sur Ajouter.

Configuration | System | IP Routing | Static Routes | Add

Configure and add a static route.

Network Address	<input type="text" value="20.1.1.0"/>	Enter the network address.
Subnet Mask	<input type="text" value="255.255.255.0"/>	Enter the subnet mask.
Metric	<input type="text" value="1"/>	Enter the numeric metric for this route (1 through 16).
Destination		
Router Address	<input type="text" value="172.16.172.34"/>	Enter the router/gateway IP address.
Interface	<input type="text" value="Ethernet 2 (Public) (172.16.172.55)"/>	Select the interface to route to.
<input type="button" value="Add"/> <input type="button" value="Cancel"/>		

Utilisez les paramètres de ces images pour configurer votre concentrateur VPN 3000.

Configuration | Tunneling and Security | IPSec | LAN-to-LAN | Add

Add a new IPSec LAN-to-LAN connection.

Enable <input checked="" type="checkbox"/>	Check to enable this LAN-to-LAN connection.																				
Name <input type="text" value="ToPIX"/>	Enter the name for this LAN-to-LAN connection.																				
Interface <input type="text" value="Ethernet 2 (Public) (172.16.172.55)"/>	Select the interface for this LAN-to-LAN connection.																				
Connection Type <input type="button" value="Bi-directional"/>	Choose the type of LAN-to-LAN connection. An <i>Originate-Only</i> connection may have multiple peers specified below.																				
<table border="1"><tr><td>Peers</td><td>172.16.172.34</td></tr></table>		Peers	172.16.172.34																		
Peers	172.16.172.34																				
Digital Certificate <input type="text" value="None (Use Preshared Keys)"/>	Enter the remote peer IP addresses for this LAN-to-LAN connection. <i>Originate-Only</i> connection may specify up to ten peer IP addresses. Enter one IP address per line.																				
<table border="0"><tr><td>Certificate <input type="radio"/> Entire certificate chain</td><td>Choose how to send the digital certificate to the IKE peer.</td></tr><tr><td>Transmission <input checked="" type="radio"/> Identity certificate only</td><td></td></tr><tr><td>Preshared Key <input type="text" value="cisco123"/></td><td>Enter the preshared key for this LAN-to-LAN connection.</td></tr><tr><td>Authentication <input type="text" value="ESP/MD5/HMAC-128"/></td><td>Specify the packet authentication mechanism to use.</td></tr><tr><td>Encryption <input type="text" value="DES-56"/></td><td>Specify the encryption mechanism to use.</td></tr><tr><td>IKE Proposal <input type="text" value="IKE-DES-MD5"/></td><td>Select the IKE Proposal to use for this LAN-to-LAN connection.</td></tr><tr><td>Filter <input type="text" value="—None—"/></td><td>Choose the filter to apply to the traffic that is tunneled through this LAN-to-LAN connection.</td></tr><tr><td>IPSec NAT-T <input type="checkbox"/></td><td>Check to let NAT-T compatible IPSec peers establish this LAN-to-LAN connection through a NAT device. You must also enable IPSec over NAT-T under NAT Transparency.</td></tr><tr><td>Bandwidth Policy <input type="text" value="—None—"/></td><td>Choose the bandwidth policy to apply to this LAN-to-LAN connection.</td></tr><tr><td>Routing <input type="text" value="None"/></td><td>Choose the routing mechanism to use. Parameters below are ignored if Network Autodiscovery is chosen.</td></tr></table>		Certificate <input type="radio"/> Entire certificate chain	Choose how to send the digital certificate to the IKE peer. Encryption <input type="text" value="DES-56"/>	Specify the encryption mechanism to use.																				
IKE Proposal <input type="text" value="IKE-DES-MD5"/>	Select the IKE Proposal to use for this LAN-to-LAN connection.																				
Filter <input type="text" value="—None—"/>	Choose the filter to apply to the traffic that is tunneled through this LAN-to-LAN connection.																				
IPSec NAT-T <input type="checkbox"/>	Check to let NAT-T compatible IPSec peers establish this LAN-to-LAN connection through a NAT device. You must also enable IPSec over NAT-T under NAT Transparency.																				
Bandwidth Policy <input type="text" value="—None—"/>	Choose the bandwidth policy to apply to this LAN-to-LAN connection.																				
Routing <input type="text" value="None"/>	Choose the routing mechanism to use. Parameters below are ignored if Network Autodiscovery is chosen.																				

Local Network: If a LAN-to-LAN NAT rule is used, this is the Translated Network address.

Network List

Use IP Address/Wildcard-mask below

Specify the local network address list or the IP address and wildcard mask for this LAN-to-LAN connection.

IP Address

Note: Enter a **wildcard mask**, which is the **reverse of a subnet mask**. A wildcard mask has 1s in bit positions to ignore, 0s in bit positions to match. For example, 10.10.1.0/0.0.0.255 = all 10.10.1.nnn addresses.

Wildcard Mask

Remote Network: If a LAN-to-LAN NAT rule is used, this is the Remote Network address.

Network List

Use IP Address/Wildcard-mask below

Specify the remote network address list or the IP address and wildcard mask for this LAN-to-LAN connection.

IP Address

Note: Enter a **wildcard mask**, which is the **reverse of a subnet mask**. A wildcard mask has 1s in bit positions to ignore, 0s in bit positions to match. For example, 10.10.1.0/0.0.0.255 = all 10.10.1.nnn addresses.

Wildcard Mask

Vérification

Cette section présente des informations que vous pouvez utiliser pour vous assurer que votre configuration fonctionne correctement.

Certaines commandes **show** sont prises en charge par l'[Output Interpreter Tool](#) (clients enregistrés uniquement), qui vous permet de voir une analyse de la sortie de la commande **show**.

- **show crypto isakmp sa** - Affiche toutes les associations de sécurité IKE (Internet Key Exchange) actuelles sur un homologue.
- **show crypto isakmp sa detail** - Affiche les détails de toutes les SA IKE actuelles sur un homologue.
- **show crypto ipsec sa** - Affiche les paramètres utilisés par les SA actuelles.
- **show xlate detail** - Affiche les informations relatives aux emplacements de traduction.

Dépannage

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration. Vous trouverez des informations supplémentaires sur le dépannage dans les documents suivants :

- [Résolution des problèmes de connexion sur le concentrateur VPN 3000](#)
- [Dépannage de sécurité IP - Comprendre et utiliser les commandes de dépannage](#)
- [Dépannage de PIX de sorte qu'il permette le passage du trafic de données sur un tunnel IPSec établi](#)

Dépannage des commandes

Certaines commandes **show** sont prises en charge par l'[Output Interpreter Tool](#) (clients enregistrés uniquement), qui vous permet de voir une analyse de la sortie de la commande show.

Note : Avant d'émettre des commandes **debug**, consultez [Informations importantes sur les commandes de débogage](#).

Cette sortie illustre un débogage fonctionnel de la négociation IKE. Voici les sorties des commandes **debug crypto isakmp** et **debug crypto ipsec**.
