Exemple de configuration du tunnel IPsec entre routeur IOS et client VPN Cisco 4.x pour Windows avec authentification utilisateur TACACS+

Contenu

Introduction

Ce document décrit comment configurer une connexion IPsec entre un routeur et le client Cisco Virtual Private Network (VPN) 4.x avec TACACS+ (Terminal Access Controller Access Control System Plus) pour l'authentification des utilisateurs. Le logiciel Cisco IOS® version 12.2(8)T et ultérieures prend en charge les connexions du client VPN Cisco 4.x. Le client VPN 4.x utilise la stratégie de groupe 2 Diffie-Hellman (D-H). La commande **isakmp policy # group 2** permet aux clients 4.x de se connecter.

Ce document montre l'authentification sur le serveur TACACS+ avec autorisation, telles que les affectations WINS (Windows Internet Naming Service) et DNS (Domain Naming Service), effectuées localement par le routeur.

Référez-vous à Configuration de Cisco VPN Client 3.x pour Windows à IOS à l'aide de l'authentification étendue locale afin d'en savoir plus sur le scénario où l'authentification de l'utilisateur se produit localement dans le routeur Cisco IOS.

Référez-vous à Configuration d'IPSec entre un routeur Cisco IOS et un client VPN Cisco 4.x pour Windows utilisant RADIUS pour l'authentification utilisateur afin d'en savoir plus sur le scénario où l'authentification utilisateur se produit en externe avec le protocole RADIUS.

Conditions préalables

Conditions requises

Assurez-vous de répondre à ces exigences avant d'essayer cette configuration :

- Pool d'adresses à attribuer pour IPsec
- Groupe nommé « vpngroup » avec le mot de passe « cisco123 »
- Authentification utilisateur sur un serveur TACACS+

Components Used

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Client VPN Cisco pour Windows version 4.0.2D (tout client VPN 3.x ou ultérieur doit fonctionner.)
- Cisco Secure pour Windows version 3.0 (tout serveur TACACS+ doit fonctionner)
- Routeur Cisco IOS 1710 version 12.2(8)T1 chargé avec le jeu de fonctions IPsecLe résultat de la commande **show version** sur le routeur est affiché ici.

```

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à Conventions relatives aux conseils techniques Cisco.

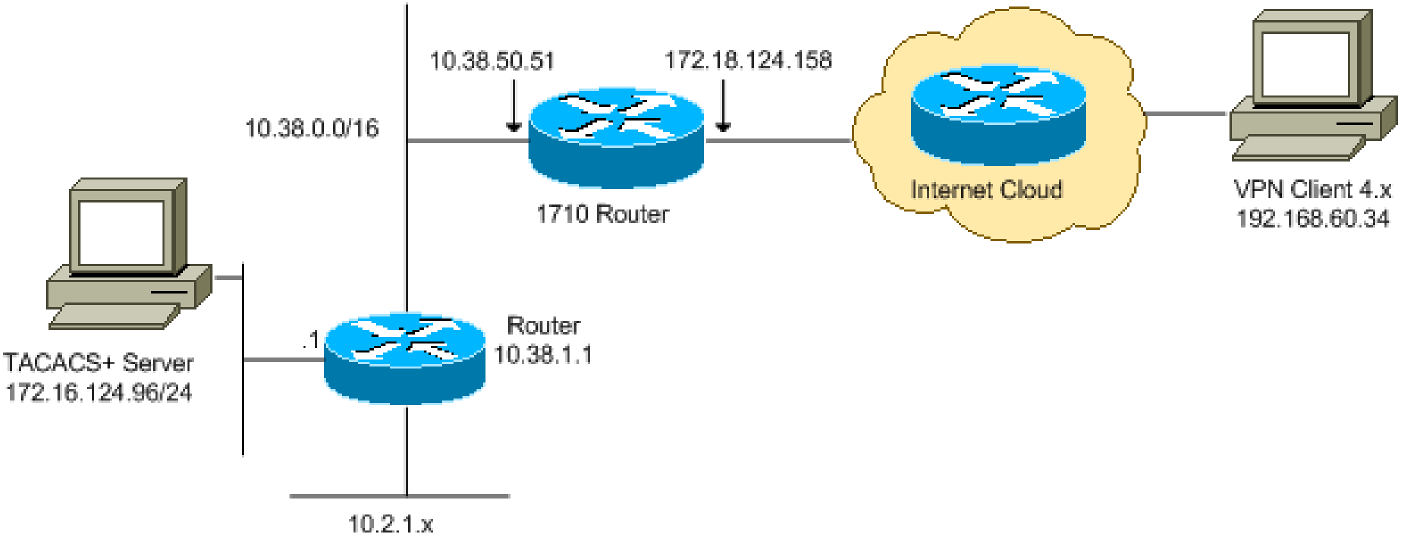
Configuration

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

Remarque : utilisez l'outil de recherche de commandes (clients enregistrés uniquement) afin de trouver plus d'informations sur les commandes utilisées dans ce document.

Diagramme du réseau

Ce document utilise la configuration réseau suivante :



Remarque : les schémas d'adressage IP utilisés dans cette configuration ne sont pas routables légalement sur Internet. Ce sont des adresses RFC 1918 qui ont été utilisées dans un environnement de laboratoire.

Configurations

Ce document utilise les configurations suivantes :

- Routeur Cisco 1710
- Serveur TACACS+
- Client VPN 4.x
- transmission tunnel partagée

Routeur Cisco 1710

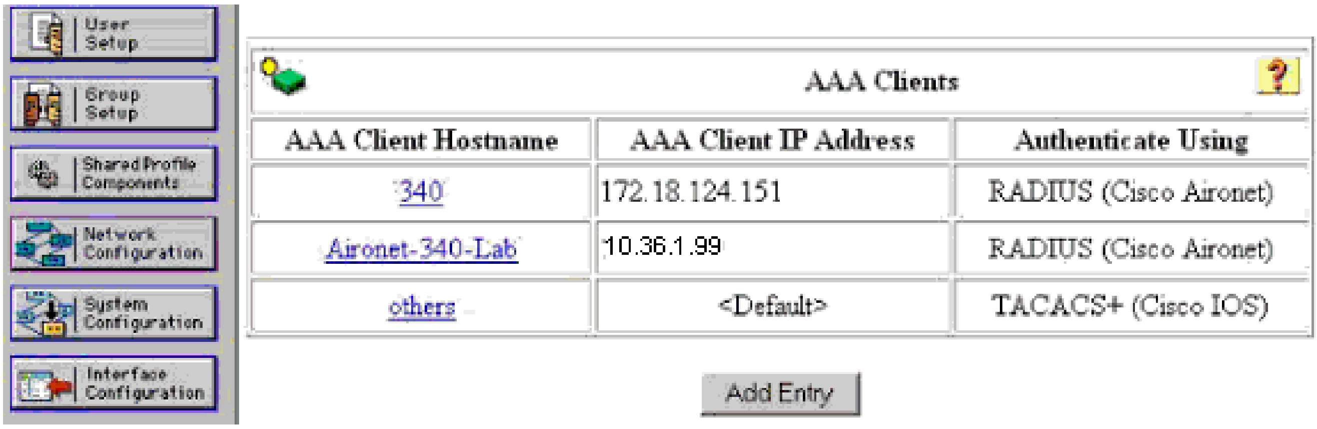
Serveur TACACS+

Pour configurer le serveur TACACS+, procédez comme suit :

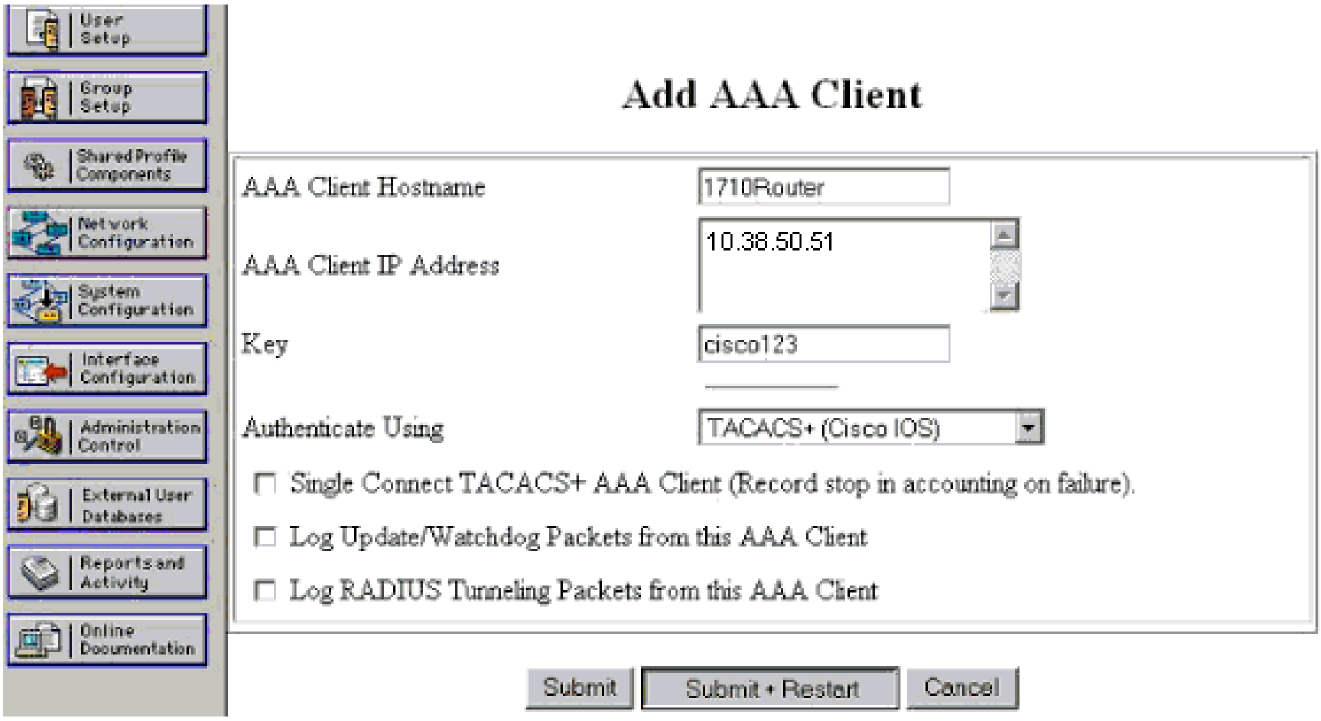
1. Cliquez sur **Ajouter une entrée** afin d'ajouter une entrée pour le routeur dans la base de données du serveur TACACS+.



AAA Clients

AAA Client Hostname	AAA Client IP Address	Authenticate Using
340	172.18.124.151	RADIUS (Cisco Aironet)
Aironet-340-Lab	10.36.1.99	RADIUS (Cisco Aironet)
others	<Default>	TACACS+ (Cisco IOS)

2. Sur la page Add AAA Client, entrez les informations du routeur comme indiqué dans cette image
   :



Add AAA Client

AAA Client Hostname: 1710Router

AAA Client IP Address: 10.38.50.51

Key: cisco123

Authenticate Using: TACACS+ (Cisco IOS)

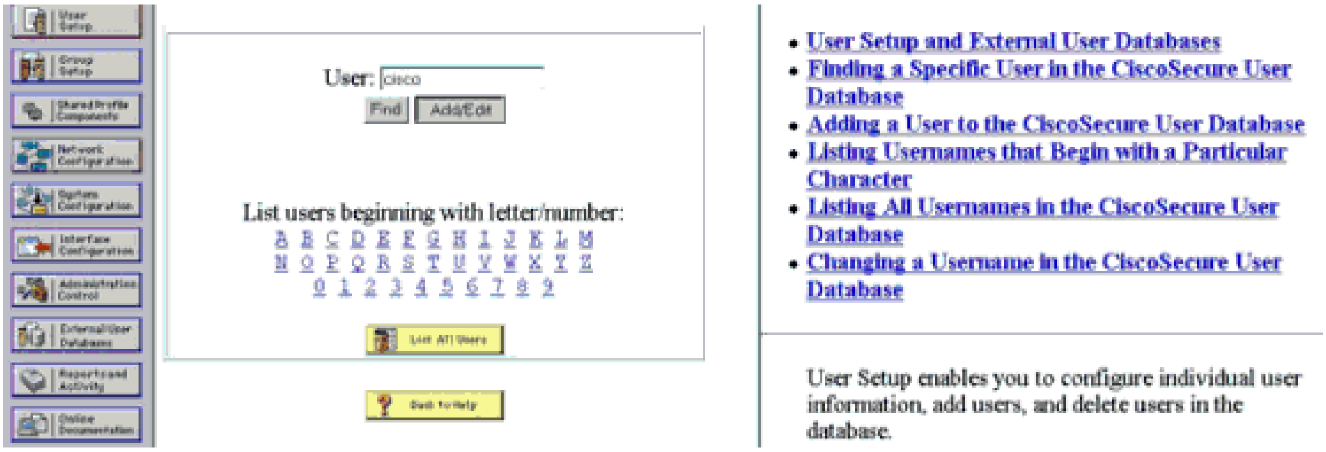
□ Single Connect TACACS+ AAA Client (Record stop in accounting on failure).

□ Log Update/Watchdog Packets from this AAA Client

□ Log RADIUS Tunneling Packets from this AAA Client

Dans le champ AAA Client Hostname, saisissez un nom pour le routeur.Dans le champ AAA Client IP Address, saisissez **10.38.50.51**.Dans le champ Key (Clé), saisissez **cisco123** comme clé secrète partagée.Dans la liste déroulante Authentifier à l'aide, sélectionnez **TACACS+ (Cisco IOS)**, puis cliquez sur **Envoyer**.

3. Dans le champ User, saisissez le nom d'utilisateur de l'utilisateur VPN dans la base de données Cisco Secure, puis cliquez sur **Add/Edit**.Dans cet exemple, le nom d'utilisateur est *cisco*.



User: cisco

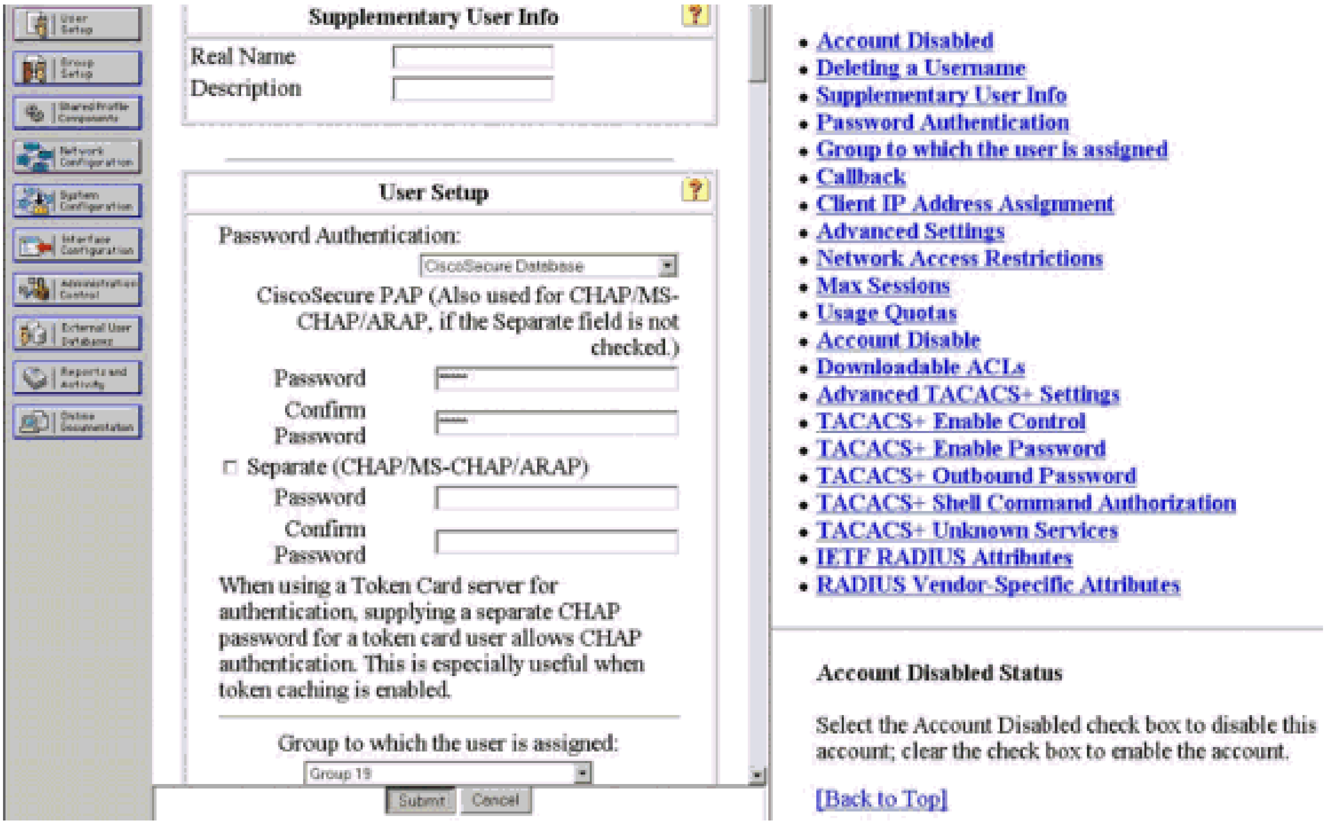
List users beginning with letter/number:

A B C D E F G H I J K L M
N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9

- User Setup and External User Databases
- Finding a Specific User in the CiscoSecure User Database
- Adding a User to the CiscoSecure User Database
- Listing Usernames that Begin with a Particular Character
- Listing All Usernames in the CiscoSecure User Database
- Changing a Username in the CiscoSecure User Database

User Setup enables you to configure individual user information, add users, and delete users in the database.

4. Àla page suivante, saisissez et confirmez le mot de passe de l'utilisateur *cisco*.Dans cet exemple, le mot de passe est également *cisco*.



Supplementary User Info

Real Name

Description

User Setup

Password Authentication:

CiscoSecure Database

CiscoSecure PAP (Also used for CHAP/MS-CHAP/ARAP, if the Separate field is not checked.)

Password ******

Confirm Password ******

□ Separate (CHAP/MS-CHAP/ARAP)

Password

Confirm Password

When using a Token Card server for authentication, supplying a separate CHAP password for a token card user allows CHAP authentication. This is especially useful when token caching is enabled.

Group to which the user is assigned:

Group 19

Submit Cancel

- Account Disabled
- Deleting a Username

Account Disabled Status

Select the Account Disabled check box to disable this account; clear the check box to enable the account.

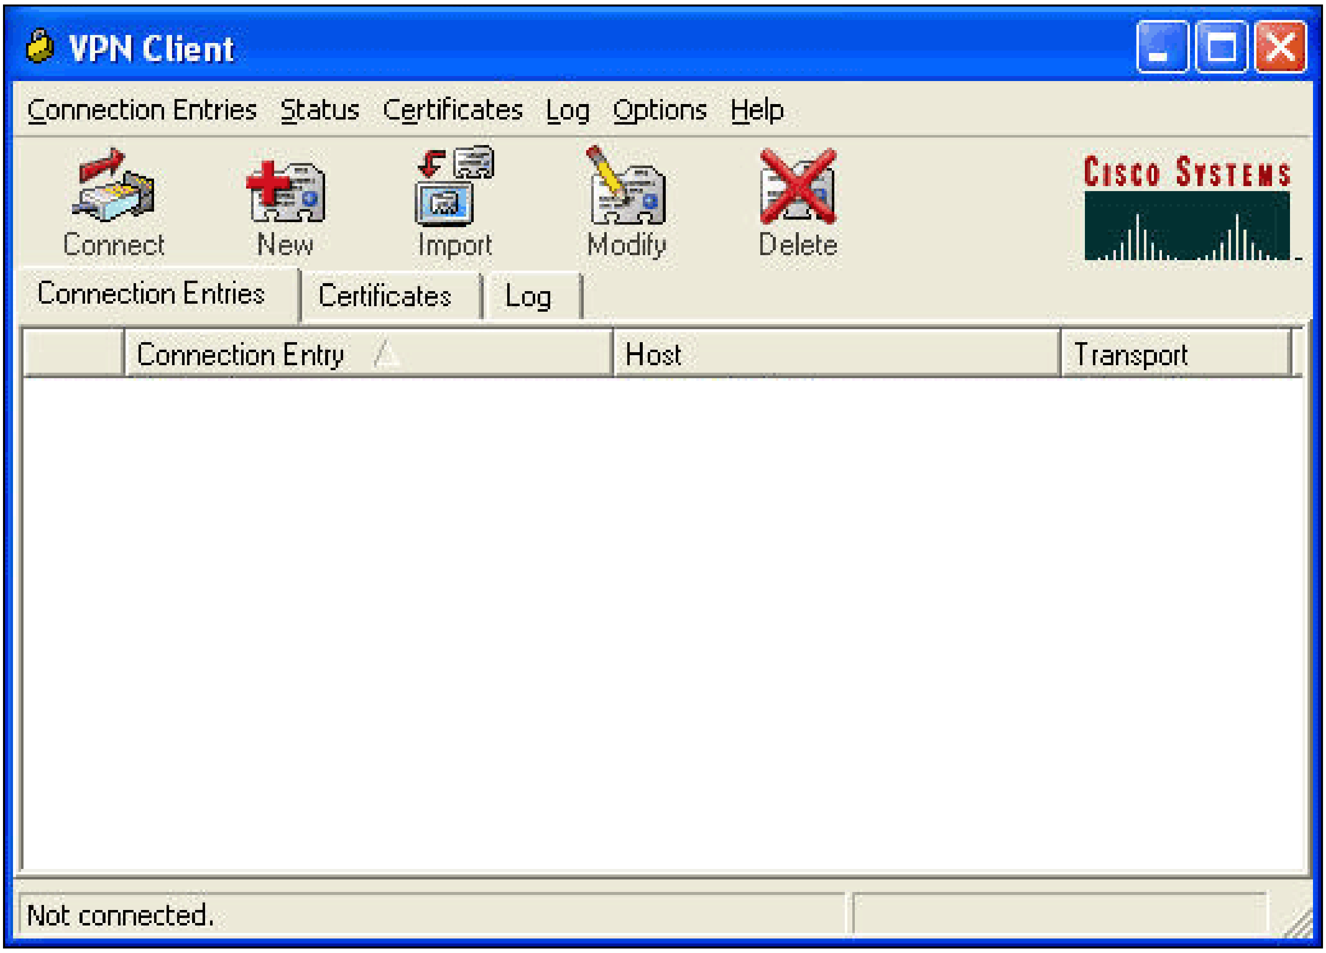
[Back to Top]

5. Si vous souhaitez mapper le compte d'utilisateur à un groupe, complétez cette étape maintenant. Lorsque vous avez terminé, cliquez sur **Soumettre**.

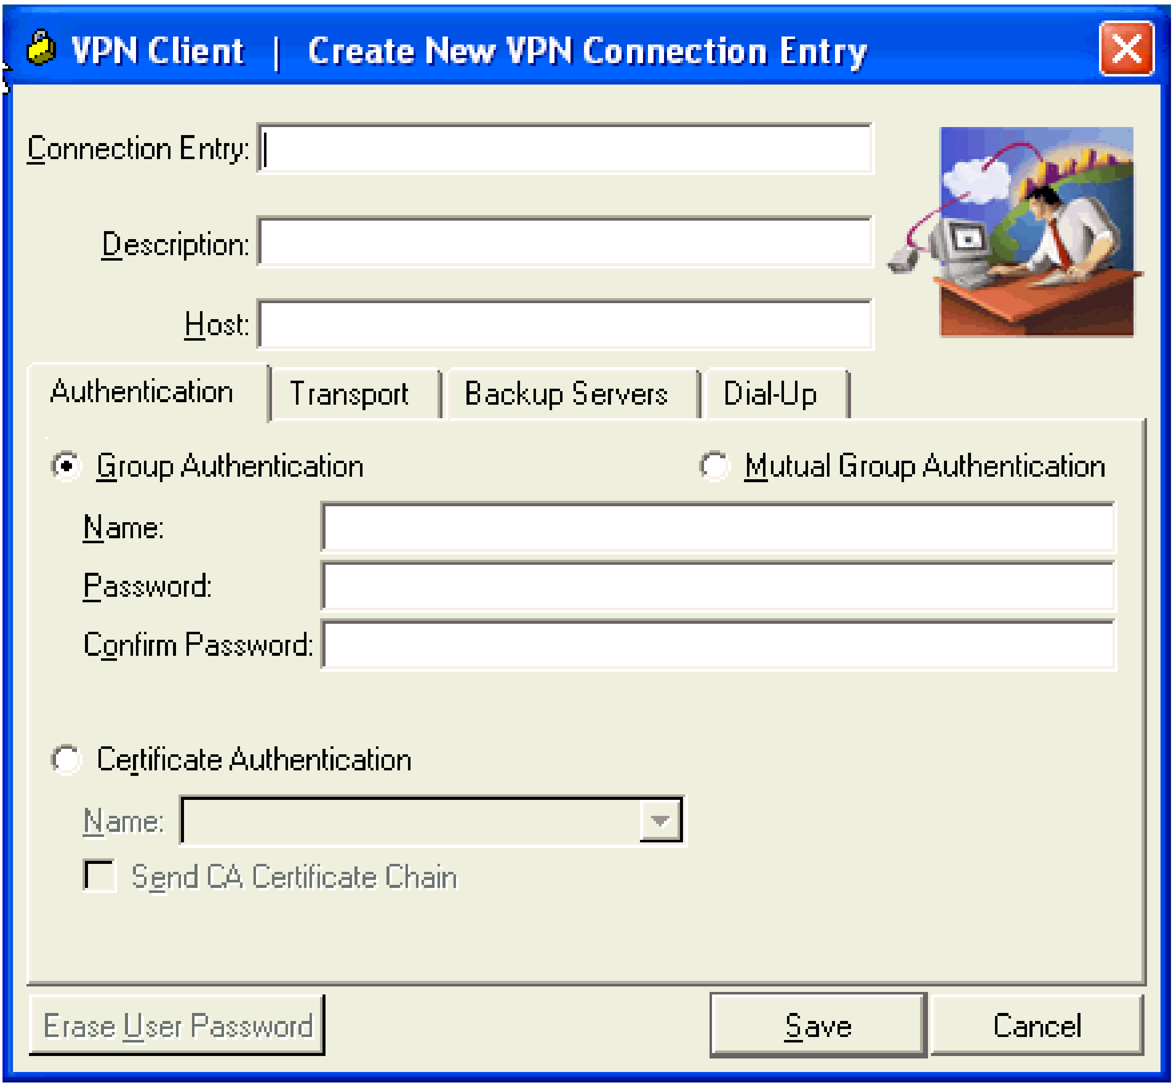
Client VPN 4.x

Afin de configurer le client VPN 4.x, procédez comme suit :

1. Lancez le client VPN, puis cliquez sur **Nouveau** afin de créer une nouvelle connexion.

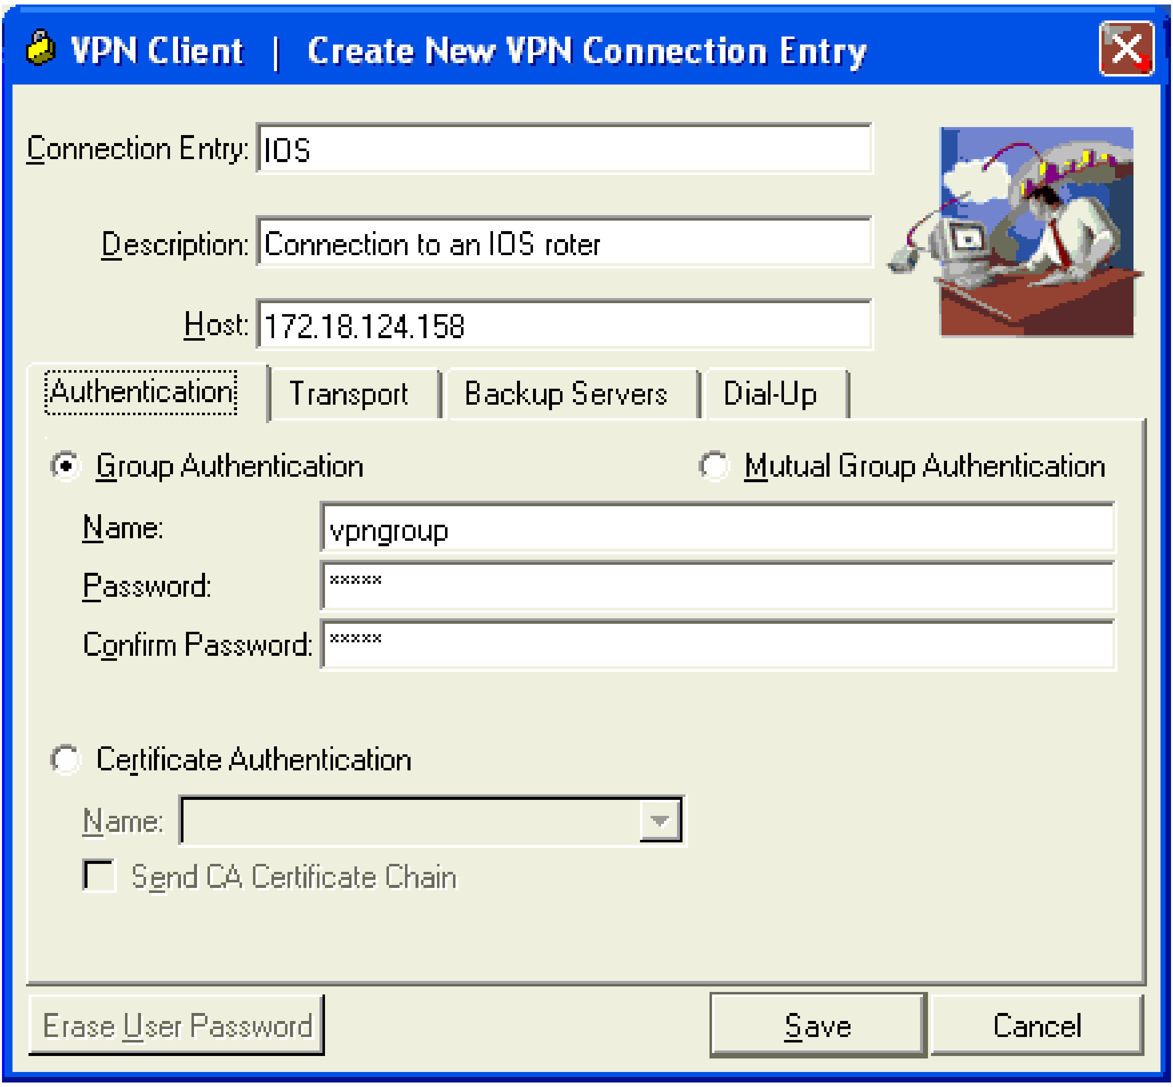


La boîte de dialogue VPN Client Create New VPN Connection Entry



s'affiche.

2. Dans la boîte de dialogue Créer une entrée de connexion VPN, saisissez les informations de connexion comme illustré dans cette image



Connection Entry: IOS

Description: Connection to an IOS roter

Host: 172.18.124.158

● Group Authentication ○ Mutual Group Authentication

Name: vpngroup

Password: *****

Confirm Password: *****

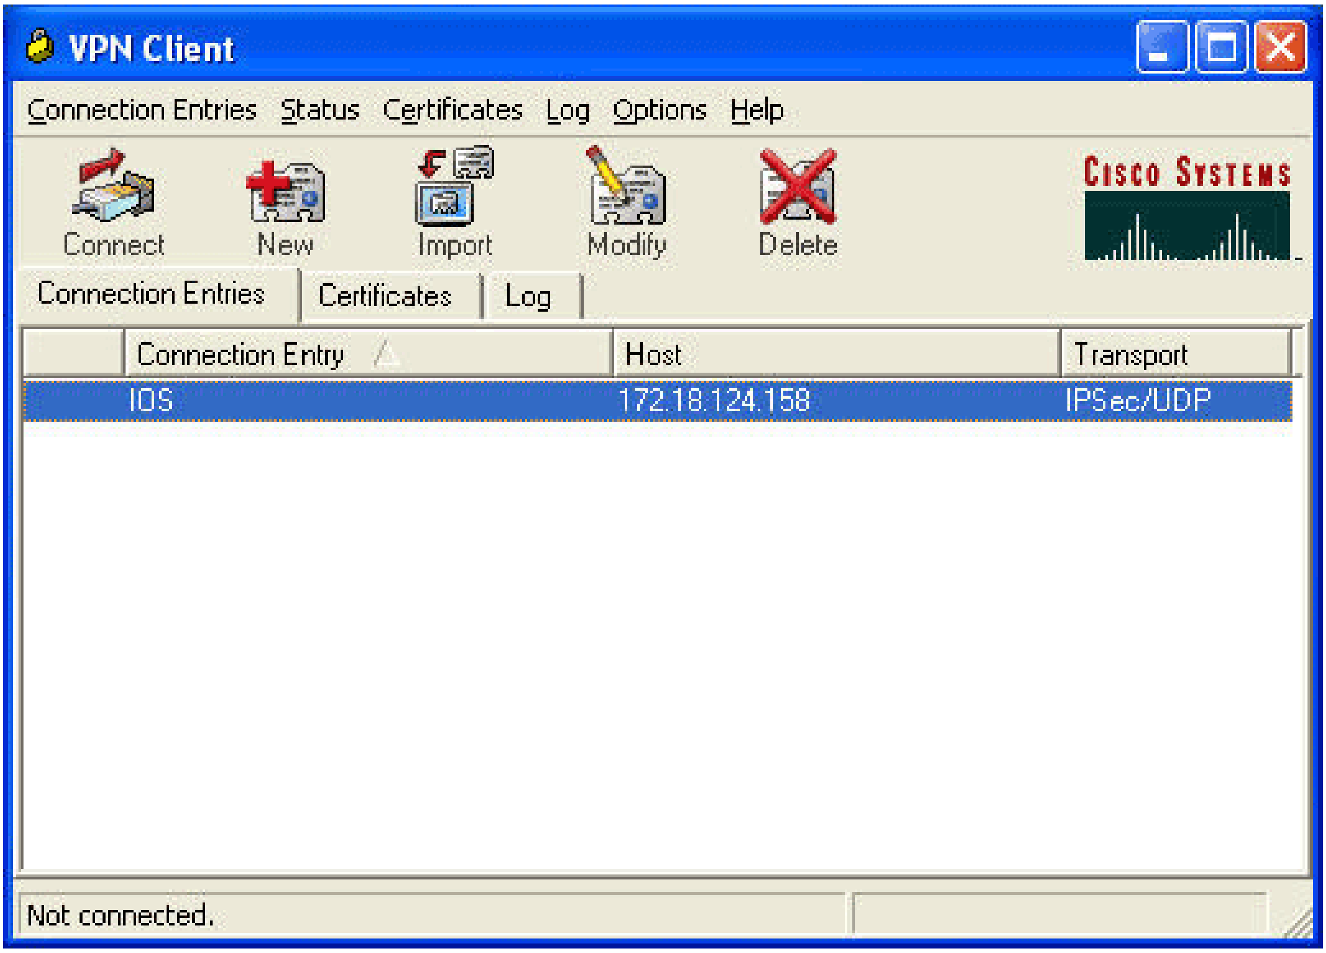
○ Certificate Authentication

Name:

□ Send CA Certificate Chain

:Dans le champ Connection Entry, saisissez un nom pour la connexion.Dans les champs Description et Host, saisissez une description et l'adresse IP de l'hôte pour l'entrée de connexion.Sous l'onglet Authentification, cliquez sur la case d'option **Authentification de groupe**, puis entrez le nom et le mot de passe de l'utilisateur.Cliquez sur **Enregistrer** afin d'enregistrer la connexion.

3. Dans la fenêtre VPN Client, sélectionnez l'entrée de connexion que vous avez créée, puis cliquez sur **Connect** afin de vous connecter au
routeur.



Connection Entry	Host	Transport
IOS	172.18.124.158	IPSec/UDP

Not connected.

4. Àmesure que le protocole IPsec négocie, vous êtes invité à saisir un nom d'utilisateur et un mot de passe. Entrez un nom d'utilisateur et un mot de passe.La fenêtre affiche les messages suivants :«Négociation des profils de sécurité. »«Votre lien est désormais sécurisé. »

transmission tunnel partagée

Afin d'activer la transmission tunnel partagée pour les connexions VPN, assurez-vous de configurer une liste de contrôle d'accès (ACL) sur le routeur. Dans cet exemple, la commande **access-list 102** est associée au groupe à des fins de fractionnement en canaux, et le tunnel est formé aux réseaux 10.38.X.X /16 et 10.2.x.x. Le trafic circule non chiffré vers les périphériques qui ne figurent pas dans la liste de contrôle d’accès 102 (par exemple, Internet).

```
access-list 102 permit ip 10.38.0.0 0.0.255.255 10.1.1.0 0.0.0.255
access-list 102 permit ip 10.2.0.0 0.0.255.255 10.1.1.0 0.0.0.255
```

Appliquez la liste de contrôle d'accès aux propriétés du groupe.

```
crypto isakmp client configuration group vpngroup
 key cisco123
 dns 10.2.1.10
 wins 10.2.1.20
 domain cisco.com
 pool ippool
 acl 102
```

Vérification

Cette section présente des informations que vous pouvez utiliser pour vous assurer que votre configuration fonctionne correctement.

Certaines commandes show sont prises en charge par l'outil Output Interpreter Tool (clients enregistrés seulement). Cet outil vous permet d'afficher une analyse de la sortie **show** command.

```
1710#show crypto isakmp sa

Dépannage

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

Dépannage des commandes

L'Outil Interpréteur de sortie (clients enregistrés uniquement) (OIT) prend en charge certaines commandes show. Employez l'OIT afin d'afficher une analyse de la sortie de la commande show.

Remarque : Consulter les renseignements importants sur les commandes de débogage avant d'utiliser les commandes de **débogage**.

- **debug crypto ipsec — Affiche des informations de débogage sur les connexions IPSec.**
- **debug crypto isakmp** - Affiche les informations de débogage sur les connexions IPsec et affiche le premier jeu d'attributs qui sont refusés en raison d'incompatibilités aux deux extrémités.
- **debug crypto engine — Affiche des informations du moteur de chiffrement.**
- **debug aaa authentication** - Affiche des informations sur l'authentification AAA/TACACS+.
- **debug aaa Authorization** : affiche des informations sur l'autorisation AAA/TACACS+.
- **debug tacacs** : affiche des informations qui vous permettent de dépanner la communication entre le serveur TACACS+ et le routeur.

Journaux du routeur
