Inleiding

Dit artikel beschrijft de stappen om het ISE vergunningbeleid te vormen op basis van het VLAN id attribuut van NAD. Deze optie is alleen beschikbaar bij IBNS 2.0.

Use Case

Klanten willen de VLAN-ID bevolken die op de toegangsinterface is geconfigureerd en het vervolgens gebruiken om toegang op ISE te bieden.

Configuratiestappen

NAD-kant

1. Configureer de switch om de eigenschappen van de VLAN-straal in de toegangsaanvraag te verzenden.

```
Device# configure terminal Device(config)# access-session attributes filter-list list TEST
Device(config-com-filter-list)# vlan-id Device(config-com-filter-list)# exit Device(config)#
access-session accounting attributes filter-spec include list TEST Device(config)# access-
session authentication attributes filter-spec include list TEST Device(config)# end
```

OPMERKING: U kunt een waarschuwing krijgen als u de opdracht "*Access-sessie accounting accounting attributes*" invoert, zoals *lijst TEST*" om migratie naar IBNS 2 te accepteren.

```
Switch(config)#access-session accounting attributes filter-spec include list TEST This operation
will permanently convert all relevant authentication commands to their CPL control-policy
equivalents. As this conversion is irreversible and will disable the conversion CLI
'authentication display [legacy|new-style]', you are strongly advised to back up your current
configuration before proceeding. Do you wish to continue? [yes]:
```

Controleer de volgende handleiding voor meer details: [Straalbepalingsgids voor VLAN-id](#)

ISE-kant

1. Maak een verificatiebeleid dat op uw behoeften is gebaseerd (MAB/DOT1X).
2. Het vergunningenbeleid omvat het volgende conditionetype, moet overeenstemmen met de exacte syntax

Radius-Tunnel-Private-Group-ID EQUALS (tag=1)

Voorbeeld:

Voor een VLAN-ID = 77

Authorization Policy (21)

Status	Rule Name	Conditions	Results
+	Vlan-id test	Radius-Tunnel-Private-Group-ID EQUALS (tag=1) 77	PermitAccess

Test

NAD-kant

```

Overview

Event	5200 Authentication succeeded
Username	C8:5B:76:8F:51:B4
Endpoint Id	C8:5B:76:8F:51:B4 ⓘ
Endpoint Profile	Unknown
Authentication Policy	Default >> MAB
Authorization Policy	Default >> Vlan-id test
Authorization Result	PermitAccess

Authentication Details

Source Timestamp	2021-11-25 21:06:55.187
Received Timestamp	2021-11-25 21:06:55.187
Policy Server	ise30baaamex
Event	5200 Authentication succeeded
Username	C8:5B:76:8F:51:B4
User Type	Host

Steps

11001 Received RADIUS Access-Request
11017 RADIUS created a new session
11027 Detected Host Lookup UseCase (Service-Type = Call Check (10)) **System Scan**
15049 Evaluating Policy Group
15008 Evaluating Service Selection Policy
15041 Evaluating Identity Policy
15048 Queried PIP - Normalised Radius.RadiusFlowType
15013 Selected Identity Source - Internal Endpoints
24209 Looking up Endpoint in Internal Endpoints IDStore - C8:5B:76:8F:51:B4
24211 Found Endpoint in Internal Endpoints IDStore
22037 Authentication Passed
24715 ISE has not confirmed locally previous successful machine authentication for user in Active Directory
15036 Evaluating Authorization Policy
15048 Queried PIP - Radius.Tunnel-Private-Group-ID
15016 Selected Authorization Profile - PermitAccess
24209 Looking up Endpoint in Internal Endpoints IDStore - C8:5B:76:8F:51:B4
24211 Found Endpoint in Internal Endpoints IDStore
11002 Returned RADIUS Access-Accept
