[Inleiding](#)

Dit document geeft een overzicht van de MWI-functies (Message Waiting Indication) in Cisco Unity Express.

[Voorwaarden](#)

[Vereisten](#)

Lezers van dit document moeten kennis hebben van Cisco Unity Express opdrachtregel interface (CLI).

[Gebruikte componenten](#)

De informatie in dit document is gebaseerd op versie 1.0/2.3.x/8.x of hoger van Cisco Unity Express. Alle voorbeeldconfiguraties en schermuitvoer worden genomen van Cisco Unity Express versie 1.1.1.

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

[Conventies](#)

Raadpleeg [Cisco Technical Tips Conventions \(Conventies voor technische tips van Cisco\)](#) voor meer informatie over documentconventies.

MWI-Overzicht

De werking van MWI voorziet gebruikers die met Cisco CallManager Express of CallManager zijn geregistreerd van een visuele indicatie dat er nieuwe spraak-mailberichten aanwezig zijn. MWI werkt niet wanneer u Cisco Unity Express hebt geïntegreerd met Cisco CallManager en het systeem is in Survivable Remote Site Telephony (SRST) modus vanwege een WAN-storing.

Als u Cisco Unity Express geïntegreerd hebt met Cisco CallManager Express, wordt een SIP-oproep (Session Initiation Protocol) geplaatst naar de *extension_MWI_on/off_number@CallManager_Express_IP_adres* wanneer een nieuw voicemailbericht in een gebruikershandleiding wordt ontvangen. De SIP-aanroep start ook op wanneer de gebruiker alle nieuwe berichten terugwint. Dit komt een telefoonnummer aan op de Cisco CallManager Express router. Het telefoonnummer heeft het MWI-nummer plus een aantal valse cijfers dat gelijk is aan het aantal cijfers in de extensie van Cisco Unity Express-abonnees. Stel bijvoorbeeld dat het MWI-on nummer voor postvak 12345 420 is. Het Cisco CallManager Express IP-adres is 10.2.3.6. In dit voorbeeld wordt het bericht verzonden naar 42012345@10.2.3.6. Het nummer van het telefoonknooppunt met de "mwi on" configuratieparameter is "420...".

Voor Cisco CallManager-integraties licht het JTAPI-protocol (Java Telephony Application Programming Interface) rechtstreeks een lamp aan. Een bepaald nummer hoeft niet te worden gebeld. Het JTAPI protocol zelf ondersteunt een **setMessageWaiting** opdracht, die MWI-gebeurtenissen verwerkt. Daarom zouden MWIs moeten werken ongeacht of MWI uitbreidingen in Cisco CallManager zijn geconfigureerd. Vergeet niet dat MWIs niet werken wanneer Cisco Unity Express in SRST-modus is. Een volledige MWI verfrist zich slechts nadat de herregisters van Cisco Unity Express met Cisco CallManager en de IP telefoons niet langer in de CallManager backmodus zijn.

Het grootste deel van de problemen komt voor bij integratie tussen Cisco CallManager Express/CallManager en Cisco Unity Express. Houd in gedachten dat MWI mogelijk niet kan correleren met een fysieke lamp. Als het nummer dat het bericht ontvangt geen primaire lijn op een telefoon is, kan het slechts een envelopbericht op het telefoondisplay ontvangen. In Cisco CallManager kunt u configureren hoe elke regel MWI afhandelt. Als slechts een of twee gebruikers een probleem hebben, kunt u hier naar het probleem gaan zoeken.

Een telefoonnummer moet een geldige postvak in het Cisco Unity Express systeem hebben om een MWI te ontvangen. Het nummer moet aan een gebruiker worden gekoppeld en die gebruiker moet een postvak hebben. Voordat u begint met het debug en nemen van geavanceerde maatregelen om problemen op te lossen, kunt u één eenvoudige taak uitvoeren om problemen op te lossen: Zorg ervoor dat de gebruiker zich in de brievenbus heeft aangemeld en spraakmailberichten kan verzenden en ophalen.

Vanuit de GUI of CLI, kunt u een gebruiker vinden waarmee u kunt testen. In dit geval is het gebruiker3. U kunt de geconfigureerde extensie voor de gebruiker vinden, de status van de gebruikershandleiding bepalen (ingeschakeld of niet ingeschakeld, onder andere informatie) en bepalen of de gebruiker nieuwe of oude berichten heeft. In dit voorbeeld, gebruikt u CLI om problemen op te lossen:

```

cue-3660-41a>show users
administrator
operator
user1
user2
user3
user4
user6
user7
user8
cue-3660-41a>show user detail username user3

"user8"              0     0     0      0       3000    0 %
cue-3660-41a>show voicemail detail mailbox user3
Owner:               /sw/local/users/user3
Type:                Personal
Description:
Busy state:          idle
Enabled:           true
Mailbox Size (seconds): 3000
Message Size (seconds): 60
Play Tutorial:        true
Space Used (seconds): 0
Total Message Count: 0
New Message Count:   0
Saved Message Count: 0
Expiration (days):   30
Greeting:             standard
Zero Out Number:
Created/Last Accessed: Jun 17 2004 09:54:39 EDT
cue-3660-41a>

```

Controleer dat deze gebruiker bestaat, een gekoppeld nummer heeft en geen berichten heeft. Als deze items waar zijn, moet de MWI-status uitgeschakeld zijn.

Opmerking: Het E.164 (ITU-T)-adres is niet gebruikt voor MWI-doeleinden. Alleen het primaire telefoonnummer kan worden gebruikt.

Cisco Unity Express-integratieproblemen

MWI met Cisco CallManager Express

U moet de configuratie controleren voordat u iets anders doet. Op Cisco CallManager Express bekijkt de configuratie met de kwestie van het **tonen in werking stellen-configuratie** bevel. Meer direct, kunt u de **show telefony-service telefoon-dn** opdracht uitgeven. Een soortgelijke uitvoer

wordt weergegeven:

```
ephone-dn 44
number 11099.....
mwi on
!
!
ephone-dn 45
number 11098.....
mwi off
!
```

Deze output illustreert een paar belangrijke informatie. Het nummer voor MWI op is 11099. Het nummer voor MWI uit is 11098. Het aantal cijfers in het kiesschema is vijf. (De vijf stippen [.....] die volgen de MWI op of uit code tonen dit.) Met andere woorden, MWI werkt alleen voor een folder nummer (DN) dat precies vijf cijfers bevat.

Aan de kant van Cisco Unity Express kunt u de configuratie en ook de licentie controleren. Een gemeenschappelijk probleem is dat een Cisco CallManager-licentie wordt geladen in plaats van een licentie voor CallManager Express. Geef de opdracht **Softwarelicenties** af van Cisco Unity Express om dit te controleren:

```
cue-3660-41a>show software licenses
Core:e
- application mode: CCME
!---- CCME represents Cisco CallManager Express. - total usable system ports: 8 Voicemail/Auto Attendant: - max system mailbox capacity time: 6000 - max general delivery mailboxes: 20 - max personal mailboxes: 100 Languages: - max installed languages: 1 - max enabled languages: 1
Als u, in plaats daarvan, vindt dat de toepassingsmodus CCM is, werkt Cisco CallManager, alles behalve MWI. Helaas, als de licentie fout is, is de enige optie een nieuw beeld van de software te geven en de licentie opnieuw toe te passen. U kunt geen berichten of configuratie opslaan of herstellen.
```

Controleer vervolgens de configuratie. U kunt de configuratie zelf bekijken met de opdracht **Show run**, of u kunt de opdracht **Show cn-toepassing** gebruiken:

```
cue-3660-41a> show ccn application
Name:                               ciscomwiapplication
Description:                         ciscomwiapplication
Script:                             setmwi.aef
ID number:                          0
Enabled:                            yes
Maximum number of sessions:        4
strMWI_OFF_DN:                      11098
strMWI_ON_DN:                       11099
CallControlGroupID:                 0
```

Opmerking: de applicatie is ingeschakeld en de MWI_OFF en MWI_ON nummers 11098 en 11099 zijn ingeschakeld. Het systeem heeft geen begrip van het aantal cijfers in de uitbreidingen; er wordt gewoon een oproep naar het juiste MWI op of uit nummer gestuurd en de postvakextensie toegevoegd. Het Cisco CallManager Express systeem moet een dial-peer met het juiste aantal punten in het doelpatroon hebben om de vraag goed te kunnen verzenden.

Tot slot, verzekert u dat het IP-adres van Cisco Unity Express SIP op het juiste Cisco CallManager Express IP-adres wijst.

```
cue-3660-41a>show ccn subsystem sip
SIP Gateway: 14.80.227.125
SIP Port Number: 5060
```

Als dit incorrect is, worden de oproepen niet naar de juiste Cisco CallManager Express verzonden. De gesprekken mislukken.

Er zijn twee manieren om te beginnen met het signaleren van problemen. Van de kant van Cisco Unity Express is het meestal het gemakkelijkst om de standaardsporen eerst uit te schakelen; dan weer in staat stellen indien nodig. Geef **alle** opdracht af om dit te doen. De spooropdracht om mee te starten is **overtrek cn stacksip dbug**.

N.B.: Raadpleeg de [ingestelde](#) documentgegevens [en verzamel](#) traceringsgegevens [in CUE](#) voor meer informatie over overtrekken.

Voordat u een MWI bericht stuurt, moet u de spoerbuffer verwijderen. Alle sporen schrijven naar deze geheugenbuffer. U wilt deze wissen zodat alle vorige berichten niet hoeven te worden weergegeven als u ze na de testoproep bekijkt. Dit wordt bereikt met een eenvoudig **duidelijk** overtrekken.

Daarna stuur je het MWI bericht. Gebruik de **opdracht Mwi, telefoonnummer xxxx verfrissen** om dit te doen. U kunt ook drempelwaarden uit de GUI uitgeven.

Tenslotte de overtrek-buffer weergeven en de uitvoer weergeven met de opdracht **lange bufferbuffer tonen**. In dit voorbeeld worden een aantal belangrijke punten belicht:

```
cue-3660-41a>trace ccn stacksip dbug
cue-3660-41a>clear trace
cue-3660-41a>mwi refresh telephonenumber 11043
cue-3660-41a>show trace buffer long
Press <CTRL-C> to exit...

Zoals in deze uitvoer wordt weergegeven, stuurt u een **INVITE**-bericht en reageert Cisco CallManager Express met een **TRYING**-bericht. Zodra Cisco CallManager Express een **bellen** verstuurt u een **CANCEL**-bericht. Het MWI-nummer haalt de telefoon niet op. De plaatsing van een aanroep op het nummer is genoeg om de lamp aan of uit te lichten. In dat geval moet je weten of in 1098 MWI aan of uit is. Bovendien moet 1043 een geldige extensie zijn in Cisco CallManager Express. Nadat u alle benodigde Cisco Unity Express-sporen hebt verzameld, is het beste om alle sporen uit te schakelen en de standaardsporen opnieuw in te schakelen. Geef de duidelijke opdracht op om sporen uit te schakelen. Plaats dan de code die hier in Cisco Unity Express CLI wordt getoond om alle standaardsporen opnieuw in te schakelen:N.B.: U kunt ook de standaardsporen herstellen als u de Cisco Unity Express opnieuw start.

```

U kunt ook gemakkelijk alle SIP-communicatie op de Cisco CallManager Express-router zelf diagnosticeren. Gewoonlijk debug de csip-berichten en debug de csip-media zijn de meest nuttige opdrachten. Wanneer alleen SIP-signalering nodig is, is deze diagnose veel sneller en leidt de Cisco Unity Express tot minder onnodige informatie. Als Cisco Unity Express het signaleren naar het juiste CallManager Express IP-adres stuurt, wordt het SIP-signaleren op elke server gespiegeld. Aanroepen naar of vanuit Cisco Unity Express vereisen G.711, wat een ander gemeenschappelijk probleem oplevert. Bijvoorbeeld, de apparaten kunnen dit SIP pakket van de module van Cisco CallManager Express tonen:

```
Mar 11 10:09:13.767 EST: //--/xxxxxxxxxx/SIP/Msg/ccsipDisplayMsg:
Sent:
SIP/2.0 488 Not Acceptable Media
Via: SIP/2.0/UDP 172.18.106.88:5060
From: "Cisco SIP Channel1" <sip:outbound-0@172.18.106.66>;tag=75b5194d-133
To: <sip:1109811043@172.18.106.66;user=phone>;tag=23F1578C-252
Date: Fri, 11 Mar 2005 15:09:13 GMT
Call-ID: e34bafcc-131@172.18.106.88:5060
Server: Cisco-SIPGateway/IOS-12.x
CSeq: 51 INVITE
Allow-Events: telephone-event
Content-Length: 0
```

Deze uitvoer geeft aan dat Cisco CallManager Express de oproep heeft afgewezen omdat het SIP **INVITE**-bericht van Cisco Unity Express niet overeenkomt met een dial-peer die G.711 is geconfigureerd. U kunt een dial peer specifiek voor het verkeer MWI toevoegen om deze vraagafwijzing te corrigeren. Het voorbeeld in dit deel heeft **1109..... VOOR MWI op en 1098..... VOOR MWI uit**. U kunt hieraan toevoegen:

```
dial-peer voice 123 voip
incoming called-number 1109[8,9].....
codec g711ulaw
no vad
!
```

Het laatste veel voorkomende probleem is dat het MWI-verkeer overeenkomt met een vertaalpatroon dat wordt toegepast op een dial-peer, VoIP-inkomende regel of elders. Of de regels van de Klasse van de Beperking (COR) kunnen de vraag blokkeren. Houd in gedachten dat, zelfs als u het MWI on/off aantal en de uitbreiding om de MWI te licht te doen instelt, de vraag zich niet noodzakelijk hetzelfde gedraagt wanneer een vraag via SIP aankomt. Raadpleeg het document [Klasse van beperkingen configureren \(COR\)](#) voor meer informatie over OCR. Samenvattend, controleer deze punten altijd:

- Er is een Cisco CallManager Express-licentie aanwezig. Geef de opdracht Softwarelicenties af. Met een Cisco CallManager licentie werkt alles *behalve* MWI.
- MWI in- en uitschakelen getallen worden ingesteld in Cisco CallManager Express. Het aantal punten geeft de lengte van de extensies aan. Geef de show telefony-service telefoon-dn opdracht uit.
- In Cisco Unity Express worden de MWI in- en uitschakelen getallen ingesteld om de in- en uitschakelen getallen in Cisco CallManager Express zonder de punten aan te passen. De opdracht voor de show cn-toepassing toont dit.

- Cisco Unity Express wijst naar het juiste Cisco CallManager Express server-IP-adres. De opdracht tonen van het subsysteem cn.
- Zorg ervoor dat de mwi optie-uitzending is ingesteld onder de opdracht SIP-subsysteem.

Als al het andere mislukt, begin dan met het probleem van de opdracht van het opsporen van cn stacksip.Bericht Waiting Indicators (MWIs) (alleen Cisco Unified CallManager Express)Symptoom: Nadat u hebt geupgrade naar een nieuwe versie van Cisco Unity Express gaan de MWI's niet branden, zelfs niet wanneer er berichten in de postvakjes blijven staan.

- Uitleg-De verbeteringsprocedure verwijderde het IP-adres van het subsysteem Session Initiation Protocol (SIP).
- Aanbevolen actie-Herstelt het SIP adres om naar de Cisco Unified CME router te wijzen.

Fout: Er is een fout opgetreden met het weergeven van uw berichtWanneer u probeert meldingen op te halen (tijdens het zoeken), is er een fout opgetreden met de foutmelding van uw bericht.Voltooit de stappen in [Om telefoonweergave voor een telefoonsysteem in te schakelen](#) om het probleem op te lossen.[Probleemoplossing voor een Cisco CallManager Express-systeem](#)Voer deze stappen uit om een oplossing voor het Cisco CallManager Express-systeem te vinden:

1. Voer de opdracht Telefoon van de show in om alle geregistreerde telefoons te tonen. Als er geen telefoons worden geregistreerd, voert u deze taken uit:Controleer DHCP-configuratie, die de standaardrouter en het TFTP-serveradres bevat (optie 150).Gebruik de opdracht dir om te controleren of de gewenste bestanden zich in het Flash geheugen van de router bevinden.Controleer of de opdracht Tftp-server is ingesteld voor de benodigde bestanden.Gebruik de opdracht Mac-Address van het telefoonregister om de activiteit van de registratie van Cisco IP-telefoon weer te geven.Gebruik de opdracht debug IP dhcp om de werking van DHCP te bevestigen.
2. Voer de opdracht Telefoon van de show in om alle geregistreerde telefoons te tonen. Als er telefoons worden geregistreerd en weergegeven, voert u deze stappen uit:Controleer of de telefoon knop die aan het folder nummer bindt juist is.Controleer of de Cisco IP-telefoons als geregistreerd weergeven.Gebruik de weergave Instellingen aan de telefoon om de IP-parameterinstellingen op de Cisco IP-telefoon te controleren.Controleer dat de Keeplevelling wordt bijgewerkt wanneer u de opdracht van de showtelefoon ingaat.Voer de opdracht DSR-adres in om de telefoon te resetten en de herregistratie te observeren om de Cisco IP-telefoons weer te geven.Voer de opdracht sneltelefoon-dn in om de staat van de Cisco IP-telefoonlijnen te controleren.Controleer het IP-adres van de telefoon en probeer het adres te typen.
3. Gebruik de opdracht telefoon-noodleven debug om het debuggen voor de Cisco IP telefoons in te stellen.
4. Gebruik het bevel van de debug telefoonstaat om de staat het zuiveren voor de telefoons van Cisco IP in te stellen.

MWI met Cisco CallManagerVoor de integraties van Cisco Unity Express met Cisco CallManager is het heel belangrijk om er zeker van te zijn dat Unity Express wordt geregistreerd en alle juiste aanmeldingsinformatie heeft.De eerste stap is om te bepalen of een telefoon in SRST modus, indien beschikbaar, is om problemen op te lossen. Meld u aan bij de router waarin de Cisco Unity Express module is geïnstalleerd. Geef vervolgens de toontelefoon geregistreerde opdracht af. Alle telefoons die geregistreerd zijn, ontvangen geen MWI, zelfs als Cisco Unity Express correct geregistreerd is in Cisco CallManager.

```
vnt-2651-44a#show ephone registered
```

```
ephone-3 Mac:0008.E31B.7AFC TCP socket:[2] activeLine:0 REGISTERED
mediaActive:0 offhook:0 ringing:0 reset:0 reset_sent:0 paging 0 debug:0
```

```

IP:14.80.119.206 51984 Telecaster 7960 keepalive 2697 max_line 6
button 1: dn 1 number 2103 CM Fallback CH1 IDLE
button 2: dn 2 number 2199 CM Fallback CH1 IDLE

```

```

ephone-4 Mac:0008.E37F.A119 TCP socket:[4] activeLine:0 REGISTERED
mediaActive:0 offhook:0 ringing:0 reset:0 reset_sent:0 paging 0 debug:0
IP:14.80.119.207 50963 Telecaster 7960 keepalive 2696 max_line 6
button 1: dn 3 number 2104 CM Fallback CH1 IDLE

```

Als geen telefoons in de reservestaat van Cisco CallManager zijn, door de **GEREGISTREERDE** status aangegeven, zoals eerder getoond, is SRST niet actief voor die apparaten. De volgende stap is dan om de Cisco Unity Express en Cisco CallManager configuraties te controleren om er zeker van te zijn dat Unity Express wordt geregistreerd op CallManager.

```

VNT-AIM-CUE1>show ccn subsystem jtapi
Cisco Call Manager: 14.80.227.127
CCM JTAPI Username: site1cue
CCM JTAPI Password: *****
Call Control Group 1 CTI ports: 28001,28002,28003,28004

```

Deze uitvoer maakt een lijst van alle nummers van de routedirectory van de computertelefonie (CTI) en van de JTAPI-account die Cisco Unity Express gebruikt om in te loggen op Cisco CallManager. U moet er zeker van zijn dat de Cisco Unity Express correct registreert bij Cisco CallManager. Bevestig eerst dat de CTI-havens daadwerkelijk zijn geregistreerd. De makkelijkste manier om dit te doen is naar de webpagina van het beheer van Cisco CallManager te gaan. Kies vervolgens Apparaat > Telefoon en zoek naar de CTI poorten die in de bovenstaande uitvoer zijn vermeld. De velden Status en IP Address moeten volledig worden ingevuld.

Find and List Phones

and show items per page

To list all items, click Find without entering any search text, or use "Device Name is not empty" as the search.

Matching record(s) 1 to 8 of 8

Real-time Information Service returned information for 4 of 8 devices listed below.

<input type="checkbox"/>	Ext.	Partition	Device Name (Line)	Description	Status	IP Address	Copy
<input type="checkbox"/>	28001	Site1CUE	 cue_site1_p01 (1)	cue_site1_p01	14.80.227.127	172.18.106.107	
<input type="checkbox"/>	28002	Site1CUE	 cue_site1_p02 (1)	cue_site1_p02	14.80.227.127	172.18.106.107	
<input type="checkbox"/>	28003	Site1CUE	 cue_site1_p03 (1)	cue_site1_p03	14.80.227.127	172.18.106.107	
<input type="checkbox"/>	28004	Site1CUE	 cue_site1_p04 (1)	cue_site1_p04	14.80.227.127	172.18.106.107	

Als u vindt dat de poorten niet geregistreerd zijn, kan Cisco Unity Express niet communiceren met Cisco CallManager. Een andere mogelijkheid is dat de inlognaam niet correct is. Geef eenvoudige pings van de module van Cisco Unity Express aan Cisco CallManager uit om dit aan te pakken.

Als dit werkt, controleer of Cisco CTIManager en de folder services, die DC Directory Server in dit geval zijn, zijn gestart. Kies Start > Programma's > Beheertools > Services op de Cisco CallManager-server om het volgende te controleren:

The screenshot shows the Windows Services snap-in window. On the left is a tree view with 'Services (Local)' selected. On the right is a grid table with columns: Name, Description, Status, and State. The table lists various services, many of which are Cisco-related. The 'DC Directory Server' service is highlighted with a blue selection bar.

U dient ook te controleren of de JTAPI gebruikersaccount, dat in dit voorbeeld site1cue is, bestaat. U dient de CTI poorten, routepunten en het CTI-toepassingsgebruik inschakelen te vinden. Controleer ook het wachtwoord. Een ander veelvoorkomend probleem is de Calling Search Space van de CTI poorten. Deze zoekruimte voor bellen moet de Partities van de directory-nummers bevatten, waarvoor u het MWI-licht probeert aan te steken. Bijvoorbeeld, moet de Roep Ruimte van het Onderzoek voor de havens van CTI, niet de Punten van de Route, de scheiding Line1 bevatten om een MWI voor uitbreiding 1234 in lijn 1 van de Partitie in te stellen. Als de Calling Search Space for the CTI poorten geen is, dan slechts uitbreidingen in de geen verdelingswerk voor MWI. Als de configuratie correct lijkt te zijn, kan de diagnostiek van JTAPI worden ingeschakeld op de Cisco Unity Express module. Maar voor in- en uitschakelen moet de computer opnieuw worden opgestart. Dit niveau van diagnostiek is buiten de reguliere instellingen voor het detecteren van sporen. Laat dit niet ingeschakeld zijn, vooral niet voor de geavanceerde integratiemodule (AIM), omdat excessieve schrijvingen op de interne flitser de levensduur van de flitser kunnen beperken. Geef een show cn trace jtapi-opdracht uit om de huidige, enabled JTAPI-sporen weer te geven: Opmerking: standaard zijn alle JTAPI-sporen uitgeschakeld.

VNT-AIM-CUE1>show ccn trace jtapi

```

Warning:          0
Informational:    0
Jtapi Debugging: 0
Jtapi Implementation: 0
CTI Debugging:    0
CTI Implementation: 0
Protocol Debugging: 0
Misc Debugging:   0

```

Geef deze opdrachten uit om alle sporen mogelijk te maken:

```

VNT-AIM-CUE1>ccn trace jtapi debug all
You will have to reload the system for your changes to take effect
VNT-AIM-CUE1>ccn trace jtapi informational all
You will have to reload the system for your changes to take effect
VNT-AIM-CUE1>ccn trace jtapi warning all
You will have to reload the system for your changes to take effect
VNT-AIM-CUE1>show ccn trace jtapi
Warning: 1
Informational: 1
Jtapi Debugging: 1
Jtapi Implementation: 1
CTI Debugging: 1
CTI Implementation: 1
Protocol Debugging: 1
Misc Debugging: 1

```

Nu moet je het systeem opnieuw laden. Geef dezelfde ccn bevelen uit die hierboven worden getoond maar geef elke opdracht met het geen sleutelwoord vooraf om dit later uit te schakelen. Geef bijvoorbeeld geen cn-spoor op jtapi en debug alles. Dit is een belangrijke stap om te onthouden, vooral wat betreft de AIM. Het niet uitvoeren van deze stap beïnvloedt de potentiële prestaties en het beperkt de levensduur van de compacte flitser kaart op de AIM. Na het opnieuw laden, begint het systeem de bestanden CiscoJtapi1.log en CiscoJtapi2.log te schrijven wanneer de eerste vol is. U kunt deze logbestanden bekijken als u de opdracht Show lognaam CiscoJtapi1.log geeft. U kunt het logbestand ook naar een FTP-server kopiëren en de informatie vervolgens offline bekijken. De opdracht is kopiëren logbestand CiscoJtapi1.log URL <ftp://user:passwd@ftpservipaddr/>. Bij beide methoden wordt alle JTAPI-informatie weergegeven. In dit voorbeeld probeert de Cisco Unity Express module om te registreren, maar is niet succesvol vanwege een WAN-storing:

```

```

De volgende overtrek toont een volledige registratie van Cisco Unity Express voor een Cisco CallManager. In dit voorbeeld zie je dat er acht CTI poorten zijn verbonden aan de JTAPI-gebruiker. Maar, omdat Cisco Unity Express alleen gelicentieerd is voor vier poorten, worden slechts vier poorten gebruikt. Merk ook op dat het systeem automatisch een volledige MWI-resynchronisatie uitvoert nadat u opnieuw hebt geregistreerd op Cisco CallManager:

```

Algemene MWI- en spraakpostsporen

Afgezien van de integratieproblemen die in het [MWI - Overzicht](#) worden genoemd, is het mogelijk om de levering en MWI gebeurtenissen in het systeem met de spoorfaciliteit problematisch op te lossen. Dit valt meestal binnen de categorie algemene problemen met spraakmail. Maar omdat deze kwesties elkaar vaak overlappen, is het goed om op een aantal basispunten te wijzen. In deze sectie wordt een voorbeeld gegeven van de opdracht alle voicemail-overzichten. Er wordt een oproep gedaan naar gebruiker 11044 en het wordt naar voicemail gestuurd. U dient minimaal de opdracht voicemail vxml en de link voicemail mwi all opdracht uit te geven. Opmerking: de gebruiker drukt op 2 om het bericht zo snel mogelijk te markeren. De MWI gebeurtenis dat dit voorbeeld aangeeft is eigenlijk *nadat* de signalering heeft plaatsgevonden. Het SIP/JTAPI-signalen treedt op en dan drukt u dit bericht af om u te laten weten dat het succesvol is. Opmerking: Er is een vraag-ID die helpt een bepaalde oproep te volgen als er meerdere oproepen tegelijkertijd zijn. In dit geval, is de vraag-ID 0x00000037e11d69. Als dit een geïntegreerd systeem van Cisco CallManager Express was, zou u ook de opdracht van het nagelgat cn stacksip moeten uitgeven. Deze opdracht toont duidelijker wanneer cijfers worden ingevoerd, evenals wanneer de verbinding wordt verbroken en andere gebeurtenissen plaatsvinden.
