Configurando o PIX para IPSEC dinâmico a estático de PIX, com NAT e Cisco VPN Client

Contents

Introduction

Nesta configuração de exemplo, um PIX remoto recebe um endereço IP através do DHCP e se conecta a um PIX central. Essa configuração permite que o PIX central aceite conexões IPSec dinâmicas. O roteador PIX remoto usa tradução de endereço de rede (NAT) para "ligar" os dispositivos com endereços privados conectados a ele à rede com endereço privado conectada ao PIX central. O PIX remoto pode iniciar conexões ao PIX central (ele conhece o ponto de extremidade), mas o PIX central não pode iniciar conexões ao PIX remoto (ele não conhece o ponto de extremidade).

Nesse exemplo de configuração, Tiger é o PIX remoto, e Lion é o PIX central. Não se sabe qual será o endereço IP de Tiger, portanto, você deve configurar o Lion para aceitar dinamicamente conexões de qualquer lugar, conhecendo a chave pré-compartilhada e curinga. O Tiger sabe qual tráfego deve ser criptografado (porque é especificado pela lista de acesso) e onde o ponto final do Leão está localizado. O Tiger deve iniciar a conexão. Os dois lados fazem NAT e nat 0 para ignorar NAT para tráfego IPsec.

Além disto, o usuário remoto desta configuração se conecta ao PIX central (Lion) usando o Cisco VPN Client 3.x. O usuário remoto não pode se conectar ao PIX remoto (Tigre), pois ambos os lados teriam atribuído endereços IP dinamicamente e não saberiam para onde enviar a solicitação.

Consulte [Exemplo de Configuração de PIX/ASA 7.x PIX-to-PIX Dynamic-to-Static IPsec com NAT e VPN Client](#) para saber mais sobre o mesmo cenário no PIX/ASA 7.x com Cisco VPN Client 4.x.

Prerequisites

Requirements

Não existem requisitos específicos para este documento.

Componentes Utilizados

As informações neste documento são baseadas nestas versões de software e hardware:

- Software Cisco PIX Firewall versão 6.0(1) (ou superior para o Cisco VPN Client 3.x)
- Software Cisco PIX Firewall versão 5.3.1 (PIX remoto)
- Cisco VPN Client versão 3.x

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Consulte as [Convenções de Dicas Técnicas da Cisco para obter mais informações sobre convenções de documentos.](#)
Configurar

Nesta seção, você encontrará informações para configurar os recursos descritos neste documento.

Nota: Use a Command Lookup Tool (somente clientes registrados) para obter mais informações sobre os comandos usados nesta seção.

Diagrama de Rede

Este documento utiliza a seguinte configuração de rede:

Verificar

Esta seção fornece informações que você pode usar para confirmar se sua configuração funciona adequadamente.

A Output Interpreter Tool (somente clientes registrados) (OIT) oferece suporte a determinados comandos show. Use a OIT para exibir uma análise da saída do comando show.

Observação: os comandos clear devem ser executados no modo de configuração.

- clear crypto ipsec sa — Redefine as associações IPsec após tentativas falhadas de negociar um túnel VPN.

- **clear crypto isakmp sa** — Redefine as associações de segurança ISAKMP (Internet Security Association and Key Management Protocol) após tentativas de negociação de um túnel VPN com falha.
- **show crypto engine ipsec** — Exibe as sessões criptografadas.

Troubleshoot

Esta seção fornece informações que podem ser usadas para o troubleshooting da sua configuração.

Comandos para Troubleshooting

A Output Interpreter Tool (somente clientes registrados) (OIT) oferece suporte a determinados comandos show. Use a OIT para exibir uma análise da saída do comando show.

Nota:Consulte Informações Importantes sobre Comandos de Depuração antes de usar comandos debug.

- **debug crypto ipsec** —Usado para ver se um cliente negocia a parte IPsec da conexão VPN.
- **debug crypto isakmp connection** —Usado para ver se os peers estão negociando a parte ISAKMP da VPN.

Exemplo de saída debug "ideal"

- Depurações de PIX central
- Depurações de PIX remoto
- Depurações de clientes
